

Welcome to Müller steel

The Finest Conical Drums in the World

Made in Switzerland

Food Contact Compliance of 72/18/26 and VP01-S

Müller Ltd Packaging use components that are made of materials listed in the Food and Drug regulations 21 CFR 175.300 and are not food additives,

or are GRAS (generally recognized as safe) and therefore comply with all compositional requirements of the Regulation (175.300). The products may be used on metal containers in contact with food, and such use may properly be said to fully comply with the Federal Food, Drug and Cosmetic Act and all

applicable food additive regulations including 21 CFR 175.300.

The film forming components are composed of authorised materials that comply with the requirements of Article 3 of the CEPE code of practice for coated articles where the food contact layer is a coating.

Similar coatings have shown BADGE extraction levels below the limits in food specified in Regulation (EC) No. 1895/2005. Epoxy novolac resins (NOGE) and other materials containing BFDGE are not knowingly added to the products, which can therefore be regarded as being BFDGE and NOGE free.

The above mentioned products enable the coated material or article to comply with Article 3 – General requirements of Regulation (EC) No. 1935/2004.

If you require any further information, please do not hesitate to contact us.
